# SKYGROW TECHNOLOGY

## Grow Lamps - *Grow Entirely Indoor!*

Our tried-and-true grow lamp system has eliminated the necessity of exposing plants to sunlight, making it now possible to have evergreen indoor gardens independent of external environmental factors. The built-in grow lights ensure plants get just the right amount of light for them to grow healthy and flourish within the installed structure.

## Fabric Pocket Structure - *Grow Easy, Grow Fast!*

SkyGrow's specially designed fabric pocket structure enables plant roots to receive sufficient air from the entire pot wall system while efficiently disbursing excess water.

## Automated Irrigation System - *Water On Time!*

SkyGrow's growing walls sustain automated irrigation with a Wi-Fi-assisted water pumping system. Complete, end-to-end automation is made possible with the integrated app that allows you to control the timings.

## Water Tank

The grow wall structure is embedded with a dedicated water tank with the capacity to hold a week's supply for water circulation.

# PRODUCT SPECIFICATION

Model Name	220 SS 50 SINGLE SIDE PLANTING	220 DS 50 DOUBLE SIDE PLANTING
Dimension of the Whole Unit (L x H)	1200mm x 2200mm	1200mm x 2200mm
